Modular, flexible config & layout system: Choose a picker size (micro, mini, large) and select components you want to include, then arrange into columns in a sequence

Micro pickers (120px) tied to input: support multiple picker types or swatch presets, etc.

1. 2D gradient picker 2. 1D gradient picker 3. Color wheel 4. Custom swatch palettes

Mini pickers (180px) with dropdown for navigating between mini pickers (swatches, history as options (could also be tabs if limited options)

Mone complex mini picker with color comparison, hex input and buttons

Fully featured large picker (380px) in a modal dialog style overlay

Simple color shifter offers an easy way to take the selected color and make it lighter (up), darker (bottom), less saturated (left) and more saturated (right) with a click

Related colors to selected color (analogous, complementary, etc.)

Recently selected color history stack

Multiple input types (HEX, RGB, HSB, CMYK?)

Allow advanced color shifter with axis table and if possible color review available

Multiple rows in history stack
